EXPERIENCE

Senior Frontend Engineer

October 2023 – Present

NASD PLC

Lagos, Nigeria

- Successfully led the construction of new applications and the transition of pre-existing web and mobile applications, with an emphasis on greatly improving their usability, scalability, and performance. By closely adhering to the design specifications and upholding strict technological standards, I made sure users had the greatest experience possible. In order to facilitate upgrades and the successful inclusion of new features while guaranteeing a smooth transition, I also implemented reusable components.
- As a frontend developer, I spearheaded the frontend development of a multi-level crowdfunding platform architecture/prototype design to deployment using React, Vite, Tailwindcss, Typescript, and Node.js. Enhanced media processing capabilities, including downloading, optimizing, compressing, and converting images/videos to various formats, as well as the efficient implementation of core features from project creation, to donating to a project, and other feature implementation on the application.
- As a versatile contributor across multiple projects, I have excelled in both backend and frontend development within dynamic, agile teams. My experience includes significant contributions to the following projects:
NASD Mobile Application: As a backend developer, I played a critical role in designing and implementing core functionalities that powered seamless user experiences and ensured robust system performance.
Private Market Platform: As a frontend developer, I utilized React, SCSS, and Next.js to create an engaging, responsive user interface, focusing on intuitive design and efficient navigation to enhance usability.
Data Portal Project: I took on dual responsibilities as both a frontend and backend developer. On the frontend, I leveraged tools like React and SCSS to deliver a visually compelling and user-friendly interface. On the backend, I developed scalable and secure APIs, ensuring smooth data flow and system integrity. In all these projects, I consistently aimed to deliver innovative solutions that aligned with user needs and organizational goals, showcasing a strong ability to adapt to diverse project requirements and technologies.

Senior Frontend Engineer

September 2023 – November 2023

Renbee (Contract)

Lagos, Nigeria (Remote)

- As a senior frontend developer, I led the end-to-end transformation of a legacy application into a performant, scalable, and modern web platform using React, TypeScript, CSS, and a robust suite of frontend tools. Working from high-fidelity Figma designs, I implemented a responsive, component-driven architecture that elevated both functionality and UX. Beyond traditional frontend development, I integrated key Web3 features, including wallet connectivity (MetaMask, WalletConnect), smart contract interactions via ethers.js, and on-chain data visualization, delivering a seamless decentralized user experience. I also built reusable design systems, real-time features, and optimized workflows that empowered rapid iteration and long-term scalability—ensuring a smooth, disruption-free migration for both users and stakeholders in a fast-paced, high-stakes environment

Software Engineer

April 2023 – August 2023

Fern Life (Contract)

London, UK (Remote)

- Collaborated with cross-functional teams to develop and implement new features for the application, enhancing user engagement and streamlining workflows.
- Designed and implemented responsive and intuitive user interfaces using React, ensuring consistent user experiences across devices and captivating presentation of interior design solutions.
- Implemented RESTful APIs using Node.js and Nest.js, enabling efficient communication between frontend and backend systems for seamless product customization.
- Integrated third-party libraries and APIs to extend application functionalities, such as integrating virtual room visualization and interactive mood board creation.

Fullstack Engineer

April 2022 – February 2023

Releaf Africa

Lagos, Nigeria

- As a pivotal member of an agile full-stack development team, I contributed to the design and implementation of sophisticated applications that enhanced collaboration, operational efficiency, and business insights. Key contributions include: Sourcing and Logistic Tool (SALT): Played a key role in developing a cutting-edge platform designed to scale Africa's agricultural sector. SALT connects stakeholders—farmers, food factories, and consumers—by leveraging technology to create rewarding and efficient supply chains. Technologies Used: Vue.js, Vuex, NestJS, Node.js, MongoDB, AWS. Geospatial Mapping Tool: Built a platform for unparalleled geospatial insights, empowering users to identify the most profitable locations for new factories across Africa. Technologies Used: Vue.js, Vuex, NestJS, Node.js, JavaScript, ArcGIS, MongoDB, AWS.

Software Engineer

October 2020 – March 2022

Decagon

Lagos, Nigeria

- Built and maintained full-stack web applications using Node.js, TypeScript, Nest.js, and Express.
- Collaborated with a team to develop an in-house chatting application for in-house communication amongst stakeholders and team members to facilitate better privacy for the dissemination of important information.
- Played a key role in a team that developed user-friendly, accessible websites, enhancing online presence and user engagement.
- Integrated cloud services such as Firebase for user authentication and database storage.

Backend Engineer

April 2020 – September 2020

Safelife International

Rivers, Nigeria

- Designed and optimized backend servers for efficient querying for both SQL (PostgreSQL, MySQL) and NoSQL (MongoDB) databases as well as healthy performance of API endpoints.
- Collaborated with a team for the proper assessment of data log patches and fixes.

TECHNICAL SKILLS

Languages: JavaScript, Typescript

Frameworks: NodeJs, React.js, Vue, React Native, Redux, Vuex Express.js, Nest.js. Next.js

Cloud: AWS

Database: SQL, MongoDB, Redis

ORM: TypeORM, Prisma, Sequelize, SQL

Developer Tools: Git, Postman, Docker, Vs Code, AWS, Heroku, DigitalOcean

PROJECTS

- **NASD Mobile App** The NASD Mobile App allows organizations, stakeholders, brokers, and investors to trade on OTC security exchanges in the Nigerian stock market. Technologies used: React Native, Typescript, NodeJS, Express, Escrow, PHP, MongoDB, MySQL <https://play.google.com/store/apps/details?id=com.nasd> |
- **VentureRamp** VentureRamp is the donor crowdfunding platform of NASD PLC that provides a transparent structure and scale to accumulate funding for social causes. The platform is very suitable for hosting and coordinating endowments for small-large scale projects such as giving back initiatives of old-school associations, and community groups, amongst others <https://ventureramp.com.ng/> |
- **Geospatial Mapping Platform** Geospatial mapping tool helps field agents as well as stakeholders in the agricultural sector and other sectors across the economy gain an unparalleled insights into the most profitable locations for the next factory anywhere in Africa. site.releaf.ng/ |
- **Sourcing and Logistic Tool (SALT)** SALT software enables stakeholders to directly connect with smallholder farmers, make purchases, offer loans intelligently, and provide logistics services using USSD, ensuring sustainability and profitability for all stakeholders. salt.releaf.ng/ |

EDUCATION

University of Benin, Edo State, Nigeria: Animal and Environmental Biology (2013-2017))

CERTIFICATIONS

VMedu. Inc: Scrum Fundamentals Certified (SFC) (2021)
